aiPHeed E29 DA brief - CALABARZON (monitoring, experimental estimates)

Record SHA-256: 7b1fa8147d195f822c361ce7c08aa8f9655d9eaaab378bdac54c9db745f839c2
EXPERIMENTAL. No forecast lead time is validated: the approved label has fewer than 5 LOW outcomes at every lead, so the furthest reliable horizon cannot be determined, and no sealed forecast has an authorized outcome yet. Figures are indicators for planning attention, not official assessments.

Official regional hunger (measured, shared by all five provinces)

Quarter	Round	Hunger %	Published
2025-Q4	November 2025 SWS Survey	16.7	2026-01-14
2026-Q1	March 2026 SWS Survey	22.4	2026-09-10
2026-Q2	June 2026 SWS Survey	17.3	2026-09-10

SWS self-rated involuntary hunger, Balance Luzon (Luzon outside Metro Manila). regional - ONE value shared by all five provinces; not a provincial or municipal measurement. 2026 publication dates are unverified upper bounds (fetch time).

Cavite

Item	Kind	Level	Value
Regional hunger (SWS)	MEASURED	regional (shared by all provinces)	17.3% (2026-Q2)
Price pressure (relative food inflation)	MEASURED	provincial	+0.87 pp (2026-Q2), little change
News evidence (FSSI)	MEASURED coverage	provincial	COMPLETE_LIMITED_EVIDENCE (2 usable articles, 2026-Q2)
Food-stress estimate for 2026-Q4	EXPERIMENTAL	province (regional hunger + provincial p	P 78% (not validated)
LGU positions	EXPERIMENTAL	city/municipality (derived, not measured	23 LGUs; 19 use a province-mean poverty substitute (density-only order
Measured local food insecurity	UNAVAILABLE	city/municipality	no authorized CBMS FIES or provincial FIES

Provincial food prices rose 0.87 pp faster than the CALABARZON average in 2026-Q2 (little change from 2026-Q1). This is price pressure, not food insecurity.
Cavite, 2026-Q4: estimated 78% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only. The regional hunger level drives this estimate; monitor the next SWS and PSA releases. No province-specific price pressure is indicated.
Suitability: MONITORING ONLY: no forecast lead has passed a validation standard (C6 not evaluable; no arm beats persistence or always-HIGH). Not a basis for allocating resources.

Laguna

Item	Kind	Level	Value
Regional hunger (SWS)	MEASURED	regional (shared by all provinces)	17.3% (2026-Q2)
Price pressure (relative food inflation)	MEASURED	provincial	+0.10 pp (2026-Q2), falling
News evidence (FSSI)	MEASURED coverage	provincial	COMPLETE_LIMITED_EVIDENCE (1 usable articles, 2026-Q2)
Food-stress estimate for 2026-Q4	EXPERIMENTAL	province (regional hunger + provincial p	P 73% (not validated)
LGU positions	EXPERIMENTAL	city/municipality (derived, not measured	30 LGUs; 27 use a province-mean poverty substitute (density-only order
Measured local food insecurity	UNAVAILABLE	city/municipality	no authorized CBMS FIES or provincial FIES

Provincial food prices rose 0.10 pp faster than the CALABARZON average in 2026-Q2 (falling from 2026-Q1). This is price pressure, not food insecurity.
Laguna, 2026-Q4: estimated 73% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only.
The regional hunger level drives this estimate; monitor the next SWS and PSA releases. No province-specific price pressure is indicated.
Suitability: MONITORING ONLY: no forecast lead has passed a validation standard (C6 not evaluable; no arm beats persistence or always-HIGH). Not a basis for allocating resources.

Quezon

Item	Kind	Level	Value
Regional hunger (SWS)	MEASURED	regional (shared by all provinces)	17.3% (2026-Q2)
Price pressure (relative food inflation)	MEASURED	provincial	+1.00 pp (2026-Q2), rising
News evidence (FSSI)	MEASURED coverage	provincial	COMPLETE_NO_USABLE_EVIDENCE (0 usable articles, 2026-Q2)
Food-stress estimate for 2026-Q4	EXPERIMENTAL	province (regional hunger + provincial p	P 79% (not validated)
LGU positions	EXPERIMENTAL	city/municipality (derived, not measured	41 LGUs; 37 use a province-mean poverty substitute (density-only order
Measured local food insecurity	UNAVAILABLE	city/municipality	no authorized CBMS FIES or provincial FIES

Provincial food prices rose 1.00 pp faster than the CALABARZON average in 2026-Q2 (rising from 2026-Q1). This is price pressure, not food insecurity.
Quezon, 2026-Q4: estimated 79% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only.
Consider prioritising this province for a closer look: check current market prices and field reports with the provincial agriculture office and the LGUs. Do not allocate resources on this estimate alone.
Suitability: MONITORING ONLY: no forecast lead has passed a validation standard (C6 not evaluable; no arm beats persistence or always-HIGH). Not a basis for allocating resources.

Rizal

Item	Kind	Level	Value
Regional hunger (SWS)	MEASURED	regional (shared by all provinces)	17.3% (2026-Q2)
Price pressure (relative food inflation)	MEASURED	provincial	+0.47 pp (2026-Q2), little change
News evidence (FSSI)	MEASURED coverage	provincial	COMPLETE_LIMITED_EVIDENCE (3 usable articles, 2026-Q2)
Food-stress estimate for 2026-Q4	EXPERIMENTAL	province (regional hunger + provincial p	P 76% (not validated)
LGU positions	EXPERIMENTAL	city/municipality (derived, not measured	14 LGUs; 12 use a province-mean poverty substitute (density-only order
Measured local food insecurity	UNAVAILABLE	city/municipality	no authorized CBMS FIES or provincial FIES

Provincial food prices rose 0.47 pp faster than the CALABARZON average in 2026-Q2 (little change from 2026-Q1). This is price pressure, not food insecurity.
Rizal, 2026-Q4: estimated 76% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only. The regional hunger level drives this estimate; monitor the next SWS and PSA releases. No province-specific price pressure is indicated.
Suitability: MONITORING ONLY: no forecast lead has passed a validation standard (C6 not evaluable; no arm beats persistence or always-HIGH). Not a basis for allocating resources.

Batangas

Item	Kind	Level	Value
Regional hunger (SWS)	MEASURED	regional (shared by all provinces)	17.3% (2026-Q2)
Price pressure (relative food inflation)	MEASURED	provincial	-2.43 pp (2026-Q2), falling
News evidence (FSSI)	MEASURED coverage	provincial	COMPLETE_NO_USABLE_EVIDENCE (0 usable articles, 2026-Q2)
Food-stress estimate for 2026-Q4	EXPERIMENTAL	province (regional hunger + provincial p	P 53% (not validated)
LGU positions	EXPERIMENTAL	city/municipality (derived, not measured	34 LGUs; 31 use a province-mean poverty substitute (density-only order
Measured local food insecurity	UNAVAILABLE	city/municipality	no authorized CBMS FIES or provincial FIES

Provincial food prices rose 2.43 pp slower than the CALABARZON average in 2026-Q2 (falling from 2026-Q1). This is price pressure, not food insecurity.
Batangas, 2026-Q4: estimated 53% chance that the food stress label is above its recent median (uncertain signal; experimental estimate). Indicative only and uncertain; rely on official releases and field information.
Suitability: MONITORING ONLY: no forecast lead has passed a validation standard (C6 not evaluable; no arm beats persistence or always-HIGH). Not a basis for allocating resources.

Would help validate: the next SWS hunger round (regional) and its sample size; PSA provincial food CPI for the coming months (and DA Bantay Presyo market price monitoring); DA provincial agriculture office and LGU field reports (crop damage, market supply); DSWD/LGU assistance and evacuation reports after shocks; CBMS household food-insecurity (FIES) results for the LGUs, when released

For the 126 LGUs whose poverty value is a province-mean substitute, the order inside a province is the order of population density. That is not a measured local food-insecurity ranking.

aiPHeed provides food-insecurity risk indicators only and does not replace official government assessments, classifications or DA decisions.
