aiPHeed E28 DA brief - CALABARZON (experimental)

Record SHA-256: 80551483378313a33537211f831890ff805d9df0904fa6574dde40e5b7141a1d
EXPERIMENTAL. No forecast lead time is validated: the approved label has fewer than 5 LOW outcomes at every lead, so the furthest reliable horizon cannot be determined, and no sealed forecast has an authorized outcome yet. Figures are indicators for planning attention, not official assessments.

2026-Q4: sealed experimental estimate (lead 1, origin 2026-10-01)

Province	P(above threshold)	80% S1 interval	Signal	Category	Largest driver	Attention
Cavite	78%	[12.37, 25.69]	MODERATE	withheld	Regional hunger (SWS Balance Luzon, fore (+3.09)	MONITOR
Laguna	73%	[11.53, 24.85]	MODERATE	withheld	Regional hunger (SWS Balance Luzon, fore (+3.09)	MONITOR
Quezon	79%	[12.52, 25.84]	MODERATE	withheld	Regional hunger (SWS Balance Luzon, fore (+3.09)	REVIEW_RECOMMENDED
Rizal	76%	[11.93, 25.26]	MODERATE	withheld	Regional hunger (SWS Balance Luzon, fore (+3.09)	MONITOR
Batangas	53%	[8.75, 22.08]	UNCERTAIN	withheld	Regional hunger (SWS Balance Luzon, fore (+3.09)	UNCERTAIN

Cavite: Cavite, 2026-Q4: estimated 78% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only. The regional hunger level drives this estimate; monitor the next SWS and PSA releases. No province-specific price pressure is indicated.
Data: hunger: last SWS round used: June 2026 SWS Survey (published by 2026-09-10); prices: last provincial CPI month used: 2026-06; news: 2026-Q2: news collected but fewer than 5 usable articles (limited signal)
Laguna: Laguna, 2026-Q4: estimated 73% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only. The regional hunger level drives this estimate; monitor the next SWS and PSA releases. No province-specific price pressure is indicated.
Data: hunger: last SWS round used: June 2026 SWS Survey (published by 2026-09-10); prices: last provincial CPI month used: 2026-06; news: 2026-Q2: news collected but fewer than 5 usable articles (limited signal)
Quezon: Quezon, 2026-Q4: estimated 79% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only. Consider prioritising this province for a closer look: check current market prices and field reports with the provincial agriculture office and the LGUs. Do not allocate resources on this estimate alone.
Data: hunger: last SWS round used: June 2026 SWS Survey (published by 2026-09-10); prices: last provincial CPI month used: 2026-06; news: 2026-Q2: news collected but no usable article; this is missing evidence, not low risk
Rizal: Rizal, 2026-Q4: estimated 76% chance that the food stress label is above its recent median (moderate signal; experimental estimate). Indicative only. The regional hunger level drives this estimate; monitor the next SWS and PSA releases. No province-specific price pressure is indicated.
Data: hunger: last SWS round used: June 2026 SWS Survey (published by 2026-09-10); prices: last provincial CPI month used: 2026-06; news: 2026-Q2: news collected but fewer than 5 usable articles (limited signal)

Batangas: Batangas, 2026-Q4: estimated 53% chance that the food stress label is above its recent median (uncertain signal; experimental estimate). Indicative only and uncertain; rely on official releases and field information.
Data: hunger: last SWS round used: June 2026 SWS Survey (published by 2026-09-10); prices: last provincial CPI month used: 2026-06; news: 2026-Q2: news collected but no usable article; this is missing evidence, not low risk

Cannot support: a measured provincial or municipal food-insecurity rate
Cannot support: a horizon reliability claim under the C6 rule: no lead has >= 5 LOW rows (by lead: 1: 4, 2: 2, 3: 2, 4: 2, 5: 1, 6: 1)
Cannot support: five independent provincial evaluations per quarter
News coverage 2021-Q1..2026-Q2: {"COMPLETE_LIMITED_EVIDENCE": 32, "COMPLETE_NO_USABLE_EVIDENCE": 78}

City and municipal ranking (142 LGUs, EXPERIMENTAL)

Indicative, relative ordering of the 142 cities and municipalities for planning attention. It is the province estimate re-weighted by PSA poverty incidence (60%) and PSA 2020 population density (40%) inside each province. It is not a measured municipal food-insecurity rate, not an independent municipal forecast and not an official classification (Chapter I, 1.7). The province estimate it starts from has NOT been validated against baselines (E25-E28), so the ranking inherits that status: EXPERIMENTAL.

- It does not say that any LGU is food insecure, or how many households are.
- Positions across provinces mostly reflect the province estimate; positions inside a province reflect the vulnerability weights only.
- For the 126 LGUs without a PSA municipal poverty estimate, the poverty term is a province-mean substitute, so their order inside the province comes from population density alone.
- Two LGUs with equal risk_index share a rank; their listing order (PSGC) carries no meaning.

Rank	LGU	Province	Risk index	Rank in prov.	Poverty used (kind)	Density/km2	Tied
1	Gen. Mariano Alvarez	Cavite	0.5638	1	4.3 (substitute)	18344
