2023 NNS

ABOUT THE 2023 NNS

The 2023 National Nutrition Survey (NNS) is a regular survey conducted by the Department of Science and Technology - Food and Nutrition Research Institute (DOST-FNRI) to provide empirical data on the nutritional and health status of Filipinos for planning nutrition and development programs for timely policy decisions at the national and regional levels.

The NNS adopted the 2013 Master Sample of the Philippine Statistics Authority (PSA) and covered 117 areas (81 Provinces, 33 HUCs and 3 other urban areas) from 2023 to 2024. An average of 384 sample households was targeted in each survey area to generate reliable estimates at the national and regional levels.

LEGAL MANDATES:

E.O. 128

Section 22 signed on January 30, 1987

- Undertake researches that define the citizenry's nutritional status, with reference particularly to the malnutrition problem, its causes and effects
- Develop and recommend policy options, strategies, programs, and projects which address the malnutrition problem for implementation by appropriate agencies
- Diffuse knowledge and technologies in food and nutrition and provide S&T services to relevant stakeholders

E.O. 352

Signed on July 1, 1996

The National Nutrition Survey is a designated statistical activity that will generate data which serves as basis for decision-making of both government and private sector.

WHY WAS THE SURVEY CONDUCTED?

GENERAL OBJECTIVE:

To provide empirical data on the nutritional and health status of Filipinos for planning nutrition and development programs for timely policy decisions at the national and regional levels.

SPECIFIC OBJECTIVES:

1. To assess the following:
   a. physical growth and dimensions of children and other population groups using anthropometric indicators;
   b. nutrition biomarkers of children and other population groups (e.g. hemoglobin, serum retinol, urinary iodine concentration, etc.);
   c. mental health conditions of adolescents and adults;
   d. food environment dimensions of food availability, typology, access, affordability, convenience, marketing and regulation and sustainable food consumption practices.

2. To determine the following:
   a. the prevalence of non-communicable disease risk factors of 10 years old and above (e.g. behavioral and physiological risk factors);
   b. mean food, energy, and nutrient intake of the household and individual members, and proportions of not meeting the energy and nutrient recommendations across age groups;
   c. the prevalence of food insecurity and coping mechanisms among households;
   d. the participation of households and individuals in selected health and nutrition-related programs;
   e. feeding practices of infants and young children, 0-23 months;
   f. maternal nutrition and health status of pregnant women and mothers with children, 0-36 months.

3. To describe the socio-economic and demographic characteristics of the households and individuals;

4. To identify correlates or determinants of nutritional status, behaviors, and other selected outcomes at the individual and household levels.

WHAT GEOGRAPHIC AREAS WERE COVERED?

Y2023

31 Provinces
8 HUCs
1 Other Areas

Y2024

50 Provinces
25 HUCs
2 Other Areas

WHO COLLECTED THE DATA?

Trained professionals:

- Nutritionist-Dietitians
- Nurses
- Registered Medical Technologists
- Other allied health professionals

2023 NNS

WHAT SPECIFIC DATA WERE OBTAINED?

ANTHROPOMETRY

Prevalence of underweight, underheight, wasting, overweight, and obesity.

CLINICAL AND HEALTH

Prevalence of elevated blood pressure, high fasting blood glucose, and dyslipidemia, as well as behavioral risk factors such as smoking, binge drinking, physical inactivity, and unhealthy diet.

FOOD SECURITY

Food security status at the household level as well as coping mechanisms and strategies.

GOVERNMENT PROGRAM PARTICIPATION

Household's and member's participation in selected nutrition and related government programs.

SOCIO-ECONOMIC CHARACTERISTICS OF HOUSEHOLDS & INDIVIDUALS

Education and occupation of household members, their type of housing unit, type of wall roof and ownership of different types of appliances to be used in the determination of wealth quintile as proxy indicator of income.

BIOCHEMICAL

Prevalence of vitamin A deficiency, anemia, iodine deficiency, and other nutrient deficiencies.

DIETARY

Quality and quantity of food and nutrient intake at the household and individual levels.

INFANT AND YOUNG CHILD FEEDING

Information on the feeding practices of children, 0-23 months old and related factors affecting feeding practices.

MATERNAL HEALTH AND NUTRITION

Health and nutrition of pregnant women and mothers with children 0-36 months, their health-seeking behaviors, and care giving practices.

FOOD ENVIRONMENT

Dimensions of food environment, and consumers' perception and behavior at the household level.

MENTAL HEALTH AND NUTRITION

Resilience and mental health condition of Filipino adolescents and adults.

HOW WERE THE SURVEY DATA COLLECTED?

Face-to-face interviews using the Electronic Data Collection System (e-DCS)

Body and blood pressure measurements

Collection of blood and urine samples

Household food weighing and 2 days non-consecutive 24-hour food recall of individual food intake

WHY ARE THE SURVEY RESULTS IMPORTANT?

- Provide evidence in crafting policies, programs, strategies, and nutrition tools among others:
  - Philippine Plan of Action for Nutrition (PPAN)
  - Food Fortification Program
  - Asin Law
  - Sin Tax Reform Law
  - Micronutrient Supplementation
  - Sweetened Beverages or TRAIN Law (RA 10963)
  - Philippine Dietary Reference Intakes
  - Nutritional Guidelines for Filipinos
  - Nutritional Guide Pyramid for Filipinos
  - *Pinggang Pinoy* (Healthy Food Plate)
- Basis in monitoring progress in achieving selected SDG indicators
- Serve as guide in planning and targeting of at-risk groups and areas
- Support the monitoring and evaluation of impact of nutrition intervention programs
