Food Price Pressure (exploratory)

Food Price Pressure (exploratory) measures provincial food price pressure, not food insecurity. HIGH means the province's food inflation (PSA, year on year) was above 4 percent, the ceiling of the BSP inflation target, which is a headline-inflation target and not a food-specific one. The 4 percent rule is a tool-adopted default; it is not adviser-endorsed and not validated. High food inflation does not prove hunger, and low food inflation does not prove adequate food.

Status: EXPERIMENTAL; tool-adopted default rule (food CPI YoY > 4%, BSP target ceiling); not adviser-endorsed; not validated; measures food price pressure, not food insecurity

Record SHA-256 03170d1e3a48d1cf94e56213940b0cb04159bf5aefa5574df8d6d37a31ba41eb; forecasts issued at origin 2026-10-01.

Forecasts (no outcome yet)

Target	Quarter	Lead	Cavite	Laguna	Quezon	Rizal	Batangas
A	2026-Q4	1	0.171	0.124	0.159	0.120	0.172
A	2027-Q1	2	0.369	0.369	0.369	0.369	0.353
B	2026-Q4	1	3.590	4.943	4.677	4.606	3.357
B	2027-Q1	2	3.086	3.086	3.086	3.086	2.607
C	2026-Q4	1	17.081	17.081	17.081	17.081	17.081
C	2027-Q1	2	21.396	21.396	21.396	21.396	21.396

A = calibrated P(food inflation > 4%); B = predicted food inflation (%); C = predicted regional hunger (%).

Evaluation (one run, date-level scoring)

Target, lead	Scored dates	Verdict	Skill vs persistence	Skill vs climatology
A_lead1	9	not demonstrated	0.207	0.178
B_lead1	9	not demonstrated	-0.346	0.136
C_lead1	7	not demonstrated	-0.375	0.305
A_lead2	7	not demonstrated	0.271	0.056
B_lead2	7	not demonstrated	-0.571	0.046

C_lead2	5	not demonstrated	-0.027	0.089

Limitations

- Food price pressure is not food insecurity: high food inflation does not prove hunger and low food inflation does not prove adequate food.
- The 4% rule is the BSP headline-inflation target ceiling applied to provincial food inflation; it is a tool-adopted default, not adviser-endorsed and not validated.
- Skill is not demonstrated for any target at either lead; persistence is the stronger forecast for food inflation and regional hunger.
- Probabilities are shrunk toward the climatological rate (fewer than 8 prior forecast dates exist for Platt calibration), and no 80% interval could be issued (fewer than 8 prior residual dates).
- About 5-9 independent dates per target and lead; the five provinces share the regional hunger value.
